

AI-Powered Overseas Consultancy Management & Automation Platform

Phase 1 — Core CRM, Communication & Client Operations Platform

1. WhatsApp Business Automation System

Clean name: WhatsApp Meta API Bot & Automation Engine

What we will build:

- Company WhatsApp Business API integration
 - Automated replies for client inquiries
 - Interactive buttons and list menus
 - Service selection flows such as Work Permit, Business Visa, Visit Visa, Study/Job Abroad
 - Client information collection
 - Human handover to employee
 - WhatsApp conversation history inside CRM
 - Document request messages
 - Appointment links and reminders
-

2. Social Media Lead Management System

Clean name: Social Media Lead Capture & CRM Intake System

What we will build:

- Lead capture from Facebook, Instagram, website forms, and manual entry
 - Store all leads in one centralized CRM
 - Auto-create client/lead profiles
 - Track lead source, campaign, service interest, and inquiry type
 - Admin view for all incoming leads
 - Employee assignment status
-

3. Lead Distribution System

Clean name: Intelligent Lead Assignment & Distribution Engine

What we will build:

- Auto-assign leads to employees
 - Assignment based on service type, country, employee availability, and workload
 - Hot/warm/cold lead priority
 - Manual reassignment by admin
 - Employee notifications for new leads
 - Lead ownership tracking
 - Lead reassignment audit log
-

4. AI Chatbot for Messaging

Clean name: AI Messaging Assistant & Client Screening Chatbot

What we will build:

- AI-assisted chat replies
- Guided screening questions
- Client intent detection
- Client service selection
- Voice note transcript understanding
- Auto-reply in text
- Basic eligibility checking
- Escalation to human employee when needed

The chatbot will not be a random free-chat bot. It will follow controlled business flows and collect structured data.

5. AI Voice & Call Agent

Clean name: AI Voice Calling & Client Screening Agent

What we will build:

- AI voice agent for client calls
- SIM/SIP/telephony-based calling integration
- AI screening calls
- Appointment booking through calls
- Call recording where supported by telephony provider
- Call transcript
- AI call summary
- Call outcome saved in CRM

Important technical note:

WhatsApp app calls should not be treated as reliably recordable. For proper recording and reporting, calls should go through SIM/SIP/telephony provider. WhatsApp calling can only be considered if official provider support is confirmed.

6. AI Appointment Booking System

Clean name: AI Appointment Scheduling & Reminder System

What we will build:

- Appointment booking through WhatsApp bot
 - Appointment booking through AI voice call
 - Employee calendar
 - Admin calendar view
 - Appointment status tracking
 - Reschedule and cancel options
 - WhatsApp reminders
 - Appointment types such as office visit, phone consultation, document submission, payment follow-up, and case review
-

7. AI-Based Interview System

Clean name: AI Audio Interview & Candidate Evaluation System

What we will build:

- Audio-based client/candidate interview
 - Predefined interview questions
 - Voice response recording
 - Speech-to-text transcription
 - AI-generated interview summary
 - Suitability/eligibility notes
 - Interview result saved in client profile
 - Admin and employee review screen
-

8. Admin Portal

Clean name: Central Admin Control Dashboard

What we will build:

- Full admin dashboard
- View all leads, clients, employees, appointments, conversations, and call logs
- Assign and reassign leads
- Monitor employee activity
- View WhatsApp conversations
- Listen to call recordings where available
- View AI summaries
- Manage services and bot flows
- Manage roles and permissions
- View daily operations reports
- View revenue and conversion reports

- Emergency employee access control
-

- **9. Employee Portal**

- Clean name: Multi-Department Employee Operations Portal

- **Explanation:**

- This portal is for all company employees, not only the sales team. Each employee will see work according to their department, role, and permissions.
 - The system will support different departments such as:
 - Sales / Consultants
 - Processing Department
 - Documentation Department
 - Finance Department
 - Call Center / Support Team
 - Marketing Team
 - Admin / Operations Team

Each department will have its own work queue, tasks, client access level, reports, and workflow actions.

- **What we will build:**

- Employee dashboard
 - Department-based dashboard
 - Assigned leads/tasks list
 - Client profile view
 - WhatsApp CRM inbox access based on role
 - Voice note transcript view
 - Call button / call logs
 - Appointment management
 - Document checklist

- Processing workflow
 - Finance/payment workflow
 - Follow-up tasks
 - Internal notes
 - Status updates
 - Daily work report
 - Department performance summary
 - Employee performance summary
 - Task handover between departments
-
- **Department-Based Employee Access**
 - **Sales / Consultant Team**
 - **Purpose:**

Handle new leads, communicate with clients, screen clients, book appointments, and convert leads.

 - **Sales team can:**
 - **View assigned leads**
 - **Reply to client messages**
 - **Call clients**
 - **View voice note transcripts**
 - **Book appointments**
 - **Collect basic information**
 - **Mark lead as hot/warm/cold**
 - **Request documents**
 - **Add follow-up notes**
 - **Mark lead converted/rejected**
 - **Handover client to processing team**

- **Sales Flow:**

Lead assigned to sales employee
↓
Sales employee contacts client
↓
Client is screened
↓
Appointment is booked
↓
Required documents are requested
↓
Lead is converted
↓
Case is handed over to processing department

2. Processing Department

Purpose:

Handle client case processing after the lead is converted.

- **Processing team can:**
- **View converted client cases**
- **Check case status**
- **Review required documents**
- **Verify application details**
- **Update processing stages**
- **Add case notes**
- **Request missing information**
- **Coordinate with documentation team**
- **Mark application as submitted / under review / completed**
- **Upload processing proofs or receipts**

- **Processing Flow:**

- Converted client received from sales team
↓
Processing officer reviews case
↓
Checks required documents and data
↓
Requests missing items if needed
↓
Updates case stage
↓
Submits application / tracks progress
↓
Marks case completed or escalates issue

- **Processing statuses:**

Case received
Documents under review
Missing documents requested
Application preparation
Application submitted
Under embassy/company review
Additional information required
Approved
Rejected
Closed

3. Documentation Department

Purpose:

Manage all client documents, detect missing documents, sort documents, check expiry, and verify document quality.

- **Documentation team can:**
- **View uploaded documents**
- **Sort documents into categories**

- Check missing documents
- Check missing client data
- Check expiry dates
- Mark documents verified/rejected
- Request replacement documents
- Add document notes
- Upload scanned documents
- Generate document checklist
- Notify client through WhatsApp/email
- Documentation Flow:
 - Client uploads/sends documents
 - ↓
 - System classifies and sorts documents
 - ↓
 - Documentation officer reviews documents
 - ↓
 - Missing/expired/wrong documents are flagged
 - ↓
 - System sends WhatsApp/email request
 - ↓
 - Client submits corrected documents
 - ↓
 - Documents are verified
 - ↓
 - Case moves to processing department

Document statuses:

- Uploaded
- Under review
- Verified
- Rejected
- Expired
- Missing

Replacement requested
Manual review required

4. Finance Department

- **Purpose:**

Manage payments, receipts, invoices, refunds, installments, commissions, and payroll-related financial records.

- Finance team can:
- View payment status
- Add payment received
- Upload payment receipt
- Generate invoice
- Track pending payments
- Track installments
- Mark payment verified
- Manage refunds
- View revenue reports
- View employee commission
- Manage salary/payroll records where allowed

- **Finance Flow:**

Client payment is requested
↓
Client pays amount
↓
Finance verifies payment
↓
Receipt is uploaded/generated
↓
Payment status is updated
↓

Admin and employee are notified

Case moves forward

Payment statuses:

- Payment pending
- Partial payment received
- Payment under verification
- Payment verified
- Invoice generated
- Refund requested
- Refund completed
- Payment overdue

5. Call Center / Support Team

Purpose:

Handle incoming inquiries, follow-ups, reminders, appointment confirmations, and support calls.

- Support team can:
- View assigned support tickets
- Reply to client queries
- Make follow-up calls
- Confirm appointments
- Handle missed calls
- Create support notes
- Escalate to sales/processing/admin
- Mark ticket resolved

- **Support Flow:**

- Client asks question or needs help
↓
Support team receives task/ticket
↓
Support replies or calls client
↓
Issue is resolved or escalated
↓
System records support activity

6. Marketing Team

- **Purpose:**

Manage social media leads, campaigns, social media automation, and content posting.

- Marketing team can:
- View social media leads
- Track campaign performance
- Create social media posts
- Generate AI captions/hashtags
- Schedule posts
- Review social media content
- Send campaign leads to sales team
- View lead source reports

- **Marketing Flow:**

- **Marketing creates campaign**
↓
Leads are generated from social media
↓
System captures leads
↓

Marketing reviews campaign performance

Qualified leads are routed to sales team

7. Admin / Operations Team

- **Purpose:**
Manage internal operations, employee access, departments, approvals, and escalations.
- **Operations team can:**
 - Manage departments
 - Assign tasks
 - Monitor workflow
 - View escalations
 - Manage employee workload
 - Approve changes
 - Review daily reports
 - Monitor pending work
 - Coordinate between departments
- **Employee Flow**
 - Employee logs in
 - ↓
 - System checks employee role and department
 - ↓
 - Employee sees department-specific dashboard
 - ↓
 - Employee views assigned work
 - ↓
 - Employee performs allowed actions
 - ↓
 - Employee updates status / adds notes

↓
System records activity
↓
Work moves to next department if needed

- **Department Handover Flow**

- Sales converts lead
↓
Handover to documentation department
↓
Documentation verifies documents
↓
Handover to processing department
↓
Processing prepares/submits case
↓
Finance verifies payments
↓
Admin monitors full case lifecycle

Role-Based Employee Actions

Department	Main Actions
Sales / Consultant	Leads, calls, appointments, conversion
Documentation	Document sorting, missing docs, expiry checks
Processing	Case stages, application submission, case updates
Finance	Payments, invoices, receipts, refunds
Support / Call Center	Follow-ups, tickets, appointment confirmations
Marketing	Campaigns, social media leads, posting
Operations/Admin	Task control, escalations, employee management

10. Client Portal

Clean name: Client Case Tracking, Document Verification & Missing Data Retrieval Portal

What we will build:

- Client login
- Case status view
- Required documents list
- Document upload
- Appointment history
- Payment/status visibility
- Assigned consultant details
- Notifications and updates
- Timeline of case progress

Document Detection & Verification System

The client portal will include an intelligent document management system that can:

- Detect which required documents are uploaded
- Detect which required documents are missing
- Identify missing client data/information
- Sort uploaded documents into correct categories
- Check document expiry dates
- Mark expired or near-expiry documents
- Flag unclear, duplicate, wrong, or incomplete documents
- Notify employee/admin when documents need review

Missing Documents & Missing Data Retrieval

When the system detects that a client has not provided required documents or required information, it will automatically generate follow-up messages.

The system will generate:

- WhatsApp message to client
- Email to client
- Employee task/reminder
- Client portal notification

Example:

Dear [Client Name],

Your application is pending because the following items are missing:

1. Passport copy
2. CNIC front side
3. Employment experience letter
4. Updated phone number

Please upload the missing documents through your client portal or send them on WhatsApp.

Document Sorting

Uploaded documents will be automatically sorted into categories such as:

- Passport
- CNIC / National ID
- Photo
- Educational documents
- Experience certificates
- Police clearance certificate
- Medical certificate
- Bank statement
- Business documents
- Visa refusal documents
- Payment receipts

- Other supporting documents

Expiry & Validity Checking

The system will check document expiry where applicable.

Examples:

- Passport expiry
- CNIC expiry
- Police clearance validity
- Medical certificate validity
- Visa document validity
- Business registration expiry
- License/certificate expiry

The system will flag:

- Valid documents
- Expired documents
- Near-expiry documents
- Documents requiring manual review

Admin/Employee Review

Employees/admin can:

- View uploaded documents
- Approve or reject documents
- Request replacement document
- Add document notes
- Mark document as verified
- Send missing document request manually
- See document status inside client profile

Example Case Statuses:

- Inquiry received
- Screening completed
- Documents pending
- Missing data requested
- Documents under review
- Expired document detected
- Replacement document requested
- Appointment booked
- Application under review
- Payment pending
- Submitted
- Approved
- Rejected
- Closed

11. Tracking System

Clean name: Client Lifecycle Tracking & Activity Timeline

What we will build:

- Full activity log for every client
- Track bot replies, employee replies, calls, appointments, documents, payments, and status changes
- Employee action history
- Lead movement tracking
- Audit trail for admin
- Candidate/client timeline view

This is important because the owner wants full visibility over what employees are doing with each client.

12. Web Platform

Clean name: Web Application, Domain & Hosting Setup

What we will build:

- Web-based admin portal
- Web-based employee portal
- Web-based client portal
- Domain setup
- Hosting setup
- Backend API deployment
- Database setup
- Secure file storage
- SSL/security configuration
- Backup and monitoring basics

13. Android Application

Clean name: Android Mobile Application

What we will build:

- Android app for employees
- Android app for clients
- Optional admin mobile view
- Push notifications
- Lead alerts
- Client updates
- Appointment alerts
- Mobile document upload

14. iOS Application

Clean name: iOS Mobile Application

What we will build:

- iOS app for employees
- iOS app for clients
- Optional admin mobile view
- Push notifications
- Case updates
- Appointment reminders
- Mobile CRM access

15. Daily Operations Reporting System

Clean name: Daily Operations, Employee Performance & Management Reports

What we will build:

- Daily employee work report
- Leads assigned
- Leads contacted
- Calls made
- Appointments booked
- Cases converted
- Missed follow-ups
- Average response time
- Revenue generated
- Export reports as PDF/Excel
- Admin summary dashboard

16. Role-Based Access Control

Clean name: Secure Role-Based Access & Permission System

What we will build:

- Super Admin role
- Admin/Manager role
- Employee/Consultant role
- Call Agent role
- Document Officer role
- Finance Officer role
- Client role
- Partner/Referral role

Access rules:

- Admin sees everything
- Employee sees assigned clients only
- Client sees own case only
- Finance sees payment data
- Document officer sees document workflow
- Partner sees referred leads only

17. AI-Based Business Plan Generation System

Clean name: AI Business Plan Generator for Visa & Investment Clients

Explanation:

This module is for clients applying for **business visas, investor visas, startup visas, or overseas business opportunities**. Many such cases require a professional business plan. Instead of preparing every business plan manually, the employee will enter the client's details, investment

amount, target country, business type, and business goals. The AI system will generate a structured business plan that the employee can review, edit, and export as PDF.

What we will build:

- Business plan dashboard
- Create new business plan
- Client details input
- Business type selection
- Country and market selection
- Investment and financial input
- AI-generated executive summary
- AI-generated market analysis
- AI-generated business model
- AI-generated financial projections
- Risk and opportunity section
- Editable business plan draft
- Version history
- PDF export
- Save business plan inside client profile

Example business plan types:

- Restaurant/cafe business plan
- Import/export business plan
- Construction services business plan
- IT services business plan
- Retail store business plan
- Transport/logistics business plan
- Small trading business plan

Phase 2 — Enterprise, Device Control & Automation Expansion

18. Enterprise Solutions

Clean name: Enterprise Operations Management System

What we will build:

- Company departments
- Branch management
- Team hierarchy
- Designations
- Internal tasks
- Internal approvals
- SOP and policy library
- Asset management
- Vendor/service provider records
- Internal audit logs
- Management dashboard

19. Employee Surveillance System

Clean name: Employee Activity Monitoring & Compliance Oversight System

What we will build:

- Monitor employee CRM activity
- Track messages sent
- Track calls made
- Track lead status changes
- Track missed follow-ups
- Track login/logout activity

- Track daily work output
- Detect inactive employees
- Alert admin for suspicious activity
- Full employee audit trail

This should be presented as **activity monitoring and compliance oversight**, not hidden surveillance. Since devices are company-provided, monitoring should be disclosed in company policy.

20. Mobile Device Management System

Clean name: Company Mobile Device Control System

What we will build:

- Register company-provided Android phones
 - Link each phone to employee profile
 - Remote lock device
 - Disable employee access
 - Remove company app/data
 - Device status tracking
 - Lost/stolen phone action
 - Emergency suspend workflow
 - Device audit log
-

21. PC/Laptop Management System

Clean name: Company PC & Laptop Access Control System**

What we will build:

- Register company laptops/PCs
- Link device to employee profile
- Remote access disable workflow

- Force logout from company systems
 - Revoke device trust
 - Disable employee CRM access
 - Lock or restrict company device through endpoint management integration
 - Laptop/PC audit logs
 - Emergency employee suspension workflow
-

22. Social Media Automation System

Clean name: AI Social Media Content Creation, Scheduling & Posting Engine

Explanation:

This module will help the company create and publish marketing content automatically. The system will use AI to generate social media posts, captions, hashtags, video scripts, voice narration, subtitles, background music suggestions, and posting schedules. It will support content creation for Facebook, Instagram, YouTube, and TikTok, depending on available platform APIs and posting permissions.

What we will build:

- Social media dashboard
- Connect Facebook, Instagram, YouTube, and TikTok accounts
- AI post idea generation
- AI caption generation
- AI hashtag generation
- AI video script generation
- AI voice narration generation
- Subtitle generation
- Background music selection/suggestion
- Content calendar
- Post scheduling

- Auto-posting where API permissions allow
- Manual approval before posting
- Campaign management
- Post performance analytics

Content types:

- Facebook posts
 - Instagram reels/posts
 - YouTube shorts
 - TikTok videos
 - Promotional visa posts
 - Success story posts
 - Country-specific offer posts
 - Educational content posts
-

Final Unified System Summary

This project will be delivered as an:

AI-Powered Overseas Consultancy Management & Automation Platform

It includes:

- WhatsApp automation
- AI messaging chatbot
- Voice note reading
- AI call agent
- Appointment booking
- AI audio interviews
- Social media lead management
- Lead distribution

- Admin portal
- Employee portal
- Client portal
- Client case tracking
- Daily operations reports
- Role-based access
- Web platform
- Android app
- iOS app
- AI business plan generation
- Enterprise operations management
- Employee activity monitoring
- Mobile device control
- PC/laptop access control
- AI social media automation

23. Employee Attendance System

Clean name: AI Face-Based Employee Attendance & Time Tracking System

Explanation:

This module will allow the company to track employee attendance using **face detection / face verification**. Employees will mark attendance from the company mobile app or office device. The system will verify the employee's face, record check-in/check-out time, and generate attendance reports for payroll and management.

This module should be linked with the **Payroll System**, **Employee Monitoring System**, and **Daily Operations Reporting System**.

What we will build:

- Employee face registration/enrollment
- Face-based check-in

- Face-based check-out
- Attendance dashboard
- Late arrival tracking
- Early leave tracking
- Break time tracking
- Overtime tracking
- Leave/absence tracking
- Location-based attendance validation
- Device-based attendance validation
- Attendance approval/rejection by admin
- Monthly attendance reports
- Payroll attendance sync
- Suspicious attendance alerts

Face Verification Flow:

Employee opens company app

Clicks Check-in

Camera opens

System verifies face

System checks device/location rules

Attendance is marked

Admin can see attendance in dashboard

Payroll uses attendance for salary calculation

Attendance Rules:

The system can support:

- Office check-in
- Remote check-in
- Field employee check-in
- Branch-wise attendance
- Shift-based attendance
- Grace time rules
- Late deduction rules
- Overtime rules
- Leave adjustment rules

Security & Anti-Fraud Features:

- Face verification
- Liveness check where supported
- GPS/location verification
- Company device verification
- Time and date validation
- Duplicate check-in prevention
- Manual override approval by admin
- Attendance audit log

Reports:

Admin can generate:

- Daily attendance report
- Monthly attendance report
- Late arrival report
- Absentee report
- Overtime report

- Branch-wise attendance report
- Employee-wise attendance report
- Payroll attendance report

Important Note:

Since this uses face detection/verification, the company should clearly inform employees and include it in the employment/device policy. Face data should be stored securely and used only for attendance and company security purposes.
